## **INVENTEC & MTM RUHRZINN – PARTNERS IN ACCELERATED SOLDERING MATERIALS RECYCLING**

The implementation of circular economy into electronics and semiconductor manufacturing to maximize resource efficiency and lower carbon footprints is a highly important key requirement.

Since over 20 years, INVENTEC shows strong commitment to sustainability offering innovative **GREENWAY** solutions minimizing health and environmental impacts and the **ECOPROGRAM** for solvent recycling.

Further, recycling of tin dross and solder paste scrap generated during electronics production is key to transforming waste material into valuable resources. Tin dross and solder paste scrap typically contain mixtures of tin, silver, copper, oxides, and impurities making them an interesting resource to be reclaimed and reused. Recycled, secondary source solder alloys have significantly lower carbon footprints as avoiding environmental impacts related to mining and smelting of primary source materials.

Such INVENTEC is pleased announce to extending the **GREENWAY ECOPROGRAM** services by partnering with MTM Ruhrzinn. The well known expert in circular metal recycling is ready to collect **solder dross** and **paste scrap** at Inventec's customers including value compensation, transportation services, recycling documentation and an **environmental certificate** stating corresponding carbon footprint savings.

Being rolled out in the GERMAN market, INVENTEC and MTM Ruhrzinn generally offer this service within all European countries and might geographically extend it to addressing individual market requirements.

MTM Ruhrzinn is a certified waste management company specializing in sustainable recycling and waste management services for the electronics industry. With around 500 tons of tin- and precious-metal-containing waste processed annually, MTM Ruhrzinn GmbH is among the leading international providers in the field of solder waste recycling. With a comprehensive range of services - from the recycling of tin and precious metals to in-depth waste management consulting and training for company waste officers - customers benefit from legally compliant, sustainable, and environmentally friendly recycling solutions that are ISO 9001 and 14001 certified.

Inventec Performance Chemicals, member of the French Dehon group, shows industry leadership with over 70 years of product innovation in SOLDERING, CLEANING, COATING, COOLING materials for high-reliability industries like AUTOMOTIVE, AEROSPACE, SEMICONDUCTOR, ENERGY and MEDICAL. With ISO 9001 & 14001 production sites in France, Switzerland, USA, Mexico, Malaysia and China, INVENTEC guarantees a smooth and cost-efficient supply chain.
